LIONEL*...THE LEADER IN M

LOCOMOTIVE POWER! ONLY LIONEL HAS MAGNE-TRACTION!

Lionel locomotives pull more cars up steeper grades around sharper curves at higher speeds... deliver more track-hugging power inch for inch than any other locos, real or model! MAGNE-TRACTION is the only permanent method of giving greater traction to electric trains.

The magic of Magne-Traction is achieved by means of permanent Alnico magnets inserted into the locomotive driving axles. Powerful magnetic attraction is thus created between the wheels and the steel track.

◀ NEW! No. 175 Rocket Launcher

A Lionel first! Pretend you're at an actual earth satellite launching. Manually operated magnetic crane lifts missile from rocket car, swings it to tower platform for pre-firing check and adjustments. By remote control, motorized tower, moving on its own track, carries the rocket to the launching platform, crane lowers rocket onto the spring-loaded launching pad and tower returns to position. The

REAL RAILROAD EFFECTS... WHISTLES, HORNS, SMOKE!

Lionel pioneered and perfected whistles and horns, actually sound-researched along the Main Lines of big railroads for accurate tonal quality. Lionel pioneered and perfected clean white puffing smoke. It puffs out in white billows, evaporates quickly. Safe, pure, clean!

AUTHENTIC, REAL RAILROAD TRACK... ONLY LIONEL HAS SUPER "O"

Lionel Super "O" track with its two flat-top T-shaped running rails and inconspicuous third

firing mechanism is set on the illuminated remote control panel and the count-down begins... 5-4-3-2-1-FIRE! Firing button is pressed and the rocket blasts into space. Rocket has safety foam nose cone. Base 11" x 11", tower and crane 17" high. (Car not included.) \$7.95

HOW TO PLAN YOUR LAYOUT

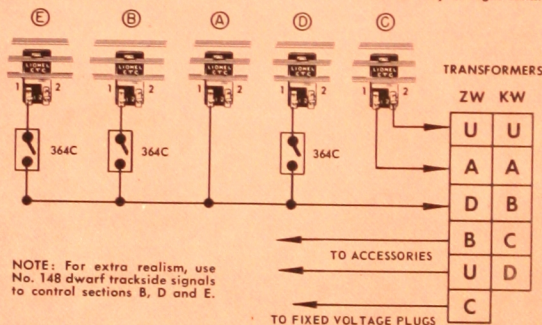

"O27" and "O"

LOCKON

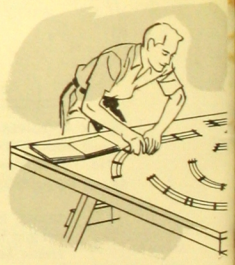

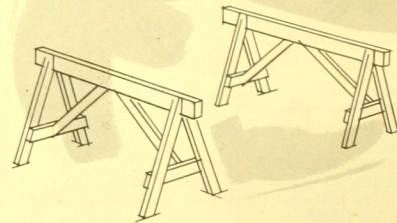

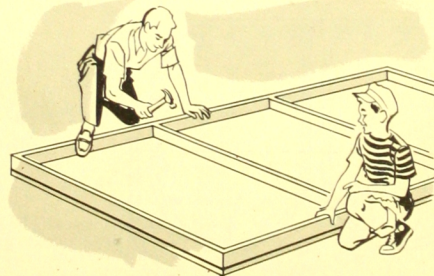

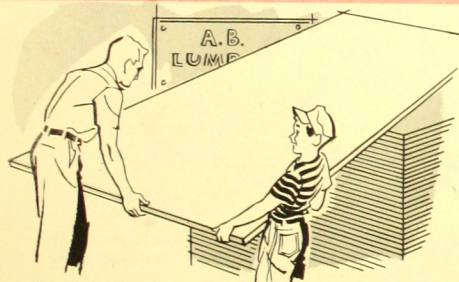

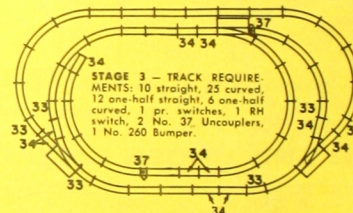

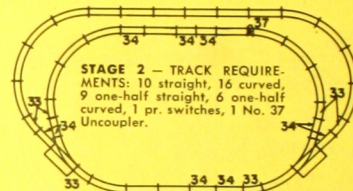

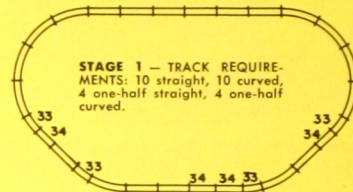

INSULATING PIN

For uncoupling, substitute an uncoupling track for any straight track.

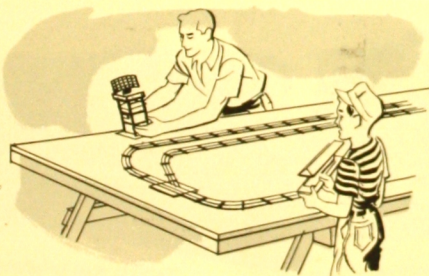

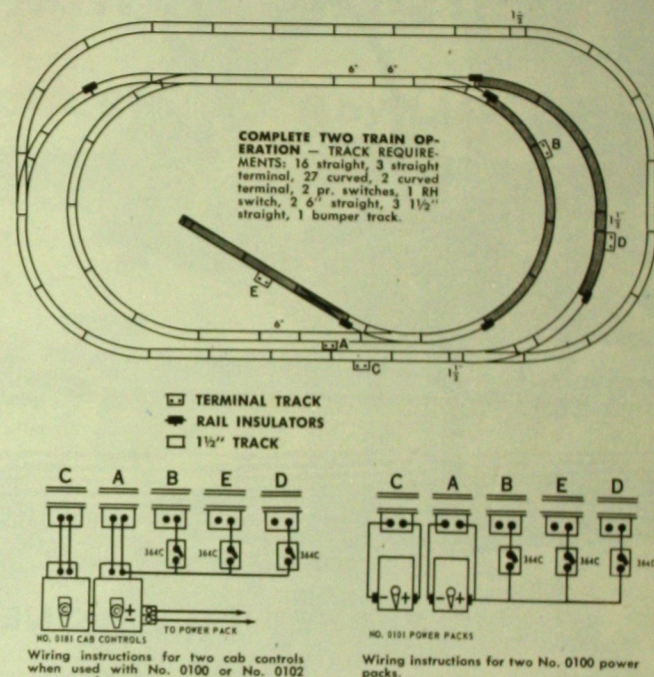

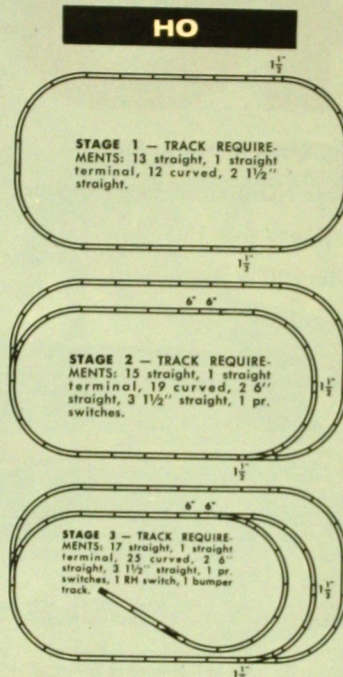

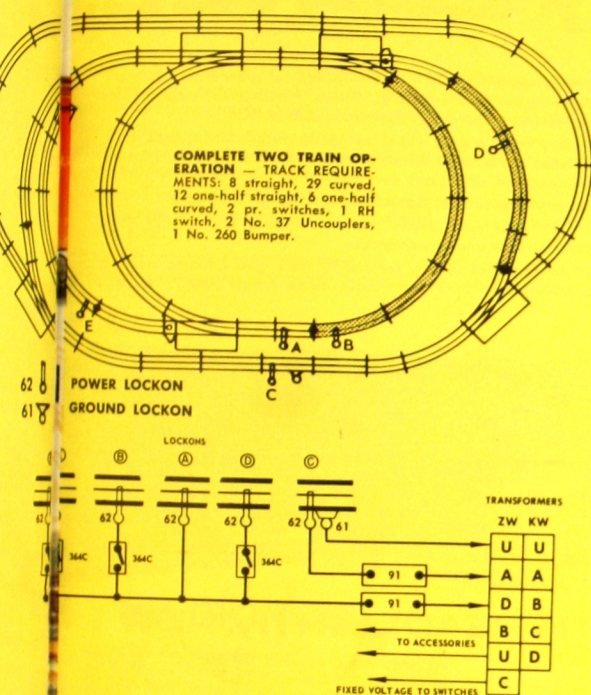

NOTE: For extra realism, use No. 148 dwarf trackside signals to control sections B, D and E.

SUPER "O"

PLAN FOR THE FUTURE ON A 4' x 8' BOARD

Screw down track, position and wire accessories, landscape with Lionel's No. 920 Scenic Display Kit.

The work is done. Now's the time to enjoy your new Lionel two train operation... your own railroad empire.

HOW A TWO TRAIN OPERATION WORKS FOR "O27"... "O"... SUPER "O"... HO

These two pages illustrate the various stages in developing a layout from a basic oval to a complete two train operation.

By insulating one loop from the other and sectionalizing portions of the loop by means of insulating pins or clips, you are able to perform various realistic railroading operations. Here are two — (1) To interchange outer and inner trains, stop outer train in Section D, run inner train onto outer loop and bring outer train onto inner loop... (2) To permit outer train to run through passing siding and back onto outer loop, hold inner train in Section B.
